

► Commonly Asked React Interview Questions (Divided into Levels)

Basic Level Questions:

1. What is React and how does it work?
2. What are the differences between functional and class components?
3. What are props and state? How are they different?
4. What is JSX, and why is it used in React?
5. How do you create a simple React component?
6. What is the Virtual DOM, and why is it important?
7. What is the purpose of the key prop in React lists?
8. How do you handle events in React?
9. What are default props in React?
10. What is conditional rendering in React?

Moderate Level Questions:

11. What are React Hooks? Can you explain useState and useEffect with examples?
12. What is the difference between controlled and uncontrolled components?
13. What is React Router, and how does client-side routing work?
14. What is the Context API, and when should you use it instead of Redux?
15. What is prop drilling, and how can it be avoided?
16. What is React.memo, and how does it help with performance optimization?
17. What is the difference between useMemo and useCallback?
18. What is a Higher-Order Component (HOC), and how is it used?
19. How does React handle forms, and what are controlled inputs?

Advanced Level Questions:

20. How does React handle re-renders, and how can you optimize unnecessary renders?
21. What is reconciliation in React?
22. How does React's diffing algorithm work?
23. What is React.lazy and Suspense? How does lazy loading work in React?
24. What are error boundaries, and how do they work?
25. How do you handle authentication and protected routes in React?
26. What are render props, and how are they different from HOCs?
27. How does server-side rendering (SSR) differ from client-side rendering (CSR) in React?
28. What are React Fiber and Concurrent Mode?
29. How do you test React components? What are the commonly used testing libraries?
