

Publicis Sapient for senior angular developer role :

1. Explain Angular ViewEncapsulation in depth with real-world scenarios.
2. how services and dependency injection are managed in the old module-based architecture , the approach.
3. In a StackBlitz environment, given two APIs (one for listing data and another for fetching data by ID):
Integrate both APIs and display results on a single page without using @Input and @Output.
On clicking a row, show the related data in another component.
After that, explain the entire flow.
4. What are the best practices for code reviews, and what cycle should a team follow?
5. Provide a brief overview of CI/CD practices (nice to have).
6. Explain microfrontend architecture in detail and how Angular fits into it.
7. What are the latest Angular features, such as control flow syntax and defer blocks?
8. Provide a brief overview of Angular SSR (Server-Side Rendering).
9. What are the common techniques for performance optimization in Angular applications?
10. How do you approach unit testing in Angular, especially for services that make HTTP calls?
11. Explain Angular routing in detail
12. What is code bundling?
13. the process to update an Angular version in a project?
14. explain Zone.js and the concept of zoneless Angular? How does Angular detect changes and update the DOM?
15. What are the different change detection strategies in Angular, and what are their use cases?
16. AfterViewInit and OnDestroy hooks use case.
